

A large, multi-story building is shown in a transparent, wireframe style, representing a Building Information Model (BIM). The structure is composed of various colored lines and planes, including red, green, blue, and yellow, which likely represent different building systems such as structural, mechanical, and electrical. The building is set against a clear blue sky.

Building Information Modelling Mission Statement

Ogilvie are committed to delivering the highest possible standard of work to our immediate clients and the wider project team.

Ogilvie can deliver the majority of its new construction projects at BIM Level 2.

Our desire is to implement BIM Level 3 at every opportunity as we believe this will improve the effectiveness of projects and assist the client with ongoing Asset Management.

Our ultimate aim is to be a Scottish and UK national Construction Industry champion of BIM Best Practice.

We will achieve this by adapting and improving our existing operating procedures to create a more integrated and collaborative approach to design development within Ogilvie and our industry peers.
